

Keeping warm in Stellenbosch

Bowman are pleased to announce that a selection of Swimming Pool Heat Exchangers have been used in Greenability Installation's "Stellenbosch Project" where Solar Hot Water, Water Based Underfloor Heating, Pool & Jacuzzi Heating are combined in one integrated system.

The Bowman heat exchangers are used for heating the pool and the jacuzzi. Mainly with solar panels and on demand with a heat pump, these can be clearly seen in the photograph below.

There are plans for further installations in the future, using the Bowman Swimming Pool range of Heat Exchangers with Titanium tube bundles.

*The hot water and underfloor heating system is done via buffer tanks with built in heat coils.
